03/24/2021 Events

In the context of the epidemiological situation generated by the infection with COVID-19, the State Agency on Intellectual Property of the Republic of Moldova (AGEPI) recommends the online filing of applications for patenting/registration of intellectual property objects.

The platform has been accessible since 2013 and aims to provide quality services to citizens and the business environment in the country and abroad, in the process of patenting/registering inventions, trademarks, industrial designs, works, phonograms and other intellectual property objects.

The advantages of the service consist in the filing of applications for registration at any time and on any day of the week. The system allows remote communication without the applicant having to travel to AGEPI headquarters. The user has secure access and data privacy guarantee. In addition, the service for online filing of applications allows efficient management of time and reduction of personal expenses.

Applicants, users of the information system, are offered the opportunity to choose how to sign the registration applications and the related documents, namely by digital signature, mobile signature or by using the MSign Government Service.

The users of the service also benefit from a modern payment system for AGEPI services, including by bank card, in advance, in cash or by using the MPay Government Service. It is important to note that the applicant does not hold any additional fees in connection with the use of the online filing system.

To facilitate the online filing process, you can consult the User Guide to the Electronic Service, which provides practical instructions for the convenience of operating within the system, the Guide for Online Filing of IPO Applications, and the Guide for Online Payment of Fees.

The service can be accessed at the following address: https://e-servicii.agepi.gov.md/ro [1]
